SUMMARY

Senior Frontend Developer with 9 years of experience in software development, including 3+ years specializing in React, Next.js, and TypeScript. Experienced in architecting scalable applications, leading frontend technical decisions, and optimizing performance across data-heavy interfaces. Strong track record of mentoring developers, establishing coding standards, and delivering measurable improvements in development speed and product quality.

SKILLS

Frontend	React.js, Next.js 14, TypeScript, JavaScript (ES6+), Tailwind CSS, Material UI, Emotion, Redux, Context API, Framer Motion, SASS/SCSS, React Hook Form, TanStack Query, Chart.js, Recharts
Backend & DB	Node.js, Express, MongoDB, Mongoose, RESTful APIs
Testing	Jest, React Testing Library, ESLint
Tooling	Git, GitHub Actions, CI/CD, npm, Figma, Chrome DevTools, Claude and GitHub Copilot (AI-assisted development)
Practices	Responsive / Mobile-First Design, Web Accessibility (WCAG), SSR/CSR Architecture, Performance Optimization, Agile/Scrum, Cross-Browser Compatibility
Legacy	AngularJS

WORK EXPERIENCE

Senior Frontend Developer · T1 Pages | February *2023 – May 2025*

Core Development

- Architected React application from scratch using Next.js 14 and TypeScript with hybrid SSR/CSR architecture, supporting both marketing pages and interactive dashboards for optimal performance.
- Engineered component library with 15+ reusable React components using Material UI, reducing development time by 40% and standardizing UI patterns across customer-facing and internal applications.
- Implemented Redux state management and real-time WebSocket notifications (Context API) so file uploads no longer blocked the UI: users were notified when processing started, could keep working, and were notified on completion.
- Applied hybrid server/client rendering in Next.js 14, fetching data in server components and populating page metadata for SEO, and advocated for SEO-friendly product names in the URL structure of the new data model.
- Built dynamic, parameterized routing for the e-commerce catalog (categories and products) and a dynamic pagination component driven by the total item counts returned by the API.
- Implemented interactive data visualizations using Chart.js, building dynamic line and pie charts for a landing page dashboard that updated in real-time based on selected report cards, giving users an accessible summary of complex report data.

Performance & Optimization

- Reduced dashboard page load time from 4.2s to 2.1s (Lighthouse) by running 9 API requests concurrently with Promise.all and applying code splitting and lazy loading; eliminated unnecessary re-renders in data-heavy dashboard components with useMemo, useCallback and React.memo.
- Implemented Tailwind CSS utility patterns with Material UI customization, creating a consistent design system that reduced styling development time across the team.

Technical Leadership

- Drove frontend technical decisions in collaboration with backend developers, drafting API response structures (WebSocket events, pagination) and the initial JSON configuration for the e-commerce setup.
- Established coding standards through peer code reviews, reducing bug reports from QA by 30% while maintaining sprint velocity.

- Contributed to ERP system enhancements using Figma designs, implementing mobile-first interfaces that improved user experience across tablets and mobile devices.

Senior Web Engineer · Monadic Industrial Solutions | June *2016 – February 2023*

Full-Stack Development

- Architected e-commerce modules from database design to UI using AngularJS, Node.js, Express, and MongoDB, delivering complete solutions for product catalog, shopping cart, and checkout workflows.
- Built comprehensive responsive frontend interfaces with AngularJS, ensuring cross-browser compatibility across Chrome, Firefox, Safari, and IE for customer-facing applications.
- Evolved from frontend specialist to full-stack developer, independently delivering complete web solutions end-to-end.

E-Commerce & Business Logic

- Designed the coupon data model and engineered a discount system with conditional logic for percentage and fixed-amount discounts, supporting both service-generated and custom promo codes and increasing sales conversion by 20% across e-commerce and POS platforms.
- Developed automated payment link system with QR code integration, reducing cart abandonment by 25% and supporting payments at the register and remotely.
- Implemented database queries and API endpoints with MongoDB aggregation pipelines for product search and inventory management.

Team Leadership

- Mentored team of 5 developers through structured code reviews, establishing coding standards and best practices for AngularJS and Node.js development.
- Established development workflows and documentation standards that improved team productivity and reduced inconsistencies across AngularJS and Node.js codebases.

SIDE PROJECTS

Expenses App — *Next.js 14 · TypeScript · MongoDB · TanStack Query · React Hook Form · Recharts · Tailwind CSS · NextAuth*

Full-stack personal finance application with Google OAuth and hCaptcha authentication, expense tracking, and real-time balance calculations. Migrated from Context API to TanStack Query for efficient server state management. Built interactive dashboard and reports module with date range filtering and Recharts data visualizations. Implemented React Hook Form with custom validation and 87 automated tests across 17 suites; WAVE and axe report zero errors, with accessibility built in from the start. Built in architecture partnership with Claude for technical decisions, with GitHub Copilot accelerating implementation. Deployed with live demo.

Portfolio — *Next.js · TypeScript · Tailwind CSS · Jest · React Testing Library*

Bilingual (English/Spanish) portfolio with 56 automated tests across 8 suites covering all core components, accessible design (WCAG), CI/CD pipeline via GitHub Actions, and downloadable resume. Iteratively designed and refined section-by-section in collaboration with Claude, from content structure to component polish.
